

Connected DataProtector/SV™

Automated Data Protection and Simple, Powerful Recovery for Microsoft Windows® File & Print Servers

Connected, a subsidiary of Iron Mountain Incorporated, introduces Connected DataProtector/SV™, a high-performance, powerful and easy-to-use solution to automatically protect and easily recover data on Microsoft Windows® file and print servers.

Connected is the leading provider of storage software for the automated protection and recovery of distributed PC data. Now, the data protection and space-saving data reduction benefits of the market-leading Connected DataProtector/PC™ solution are available for Microsoft Windows file and print servers.

HOW IT WORKS

The Connected DataProtector/SV software provides the easiest and most efficient way to back up and restore information on Windows file and print servers.

EASY, FAST AND COMPLETE BACKUP AND RECOVERY FOR REMOTE SERVERS

The Connected DataProtector/SV solution automatically protects Microsoft Windows 2003- or Microsoft Windows 2000-based file and print servers as easily and reliably as the Connected DataProtector/PC solution backs up PCs. The Connected DataProtector/SV solution seamlessly integrates with Connected DataProtector/PC solution implementations, saving administration time, and optimizing network and storage resources.

EASY DEPLOYMENT – The solution deploys faster and easier than other server backup solutions; just install the client on the servers you need to protect.

EASY AUTOMATED BACKUP – Set the Connected DataProtector/SV solution to run backups that fit your schedule. Once the initial full backup is complete, incremental backups take just minutes.

EASY DATA RECOVERY – The Connected DataProtector/SV solution provides rapid, reliable data recovery through a secure Internet connection, or via a variety of digital media options.

UNSURPASSED MANAGEABILITY – The Connected DataProtector/SV solution requires IT assistance only to install the client and set backup and recovery parameters. Connected’s centralized management tools – included in the Connected Support Center – can be used to configure and automatically apply customized settings to backup distributed file servers.

THE POWER TO HEAL SERVERS – This solution includes the Connected DataProtector/PC solution’s Heal feature, giving you the ability to return corruption-damaged file servers to a previously working state. Viruses, data corruption and user error no longer have the power to stop file servers.

CONSUMES LESS STORAGE SPACE THAN ALTERNATIVE SOLUTIONS

The Connected DataProtector/SV solution actually saves storage space while backing up your distributed data, by making the most efficient use of storage resources.

SendOnce®. A patented Connected technology, SendOnce spares you the cost of repeatedly backing up multiple copies of identical files, by creating a SendOnce pool of shared files. And because it works simultaneously against both server and PC data, only unique server files require space on data center servers.

Delta Block®. Another patented Connected technology, the Delta Block software backs up only incremental changes to existing files, at the block level. This saves the space and bandwidth of repeatedly backing up large files.

Data Compression. After SendOnce and Delta Block technologies have been applied, files are further compressed to minimize their storage footprint.

UNBEATABLE SCALABILITY

The Connected DataProtector/SV solution gives you the power to back up as many remote servers as you like, with a minimum of strain to your network, your data center and your IT staff. Deploying complete backup and recovery capabilities to any Microsoft Windows file or print server is simply a matter of installing the client software and setting its operational parameters.

SECURE DATA STORAGE

The Connected DataProtector/SV solution provides the highest levels of digital security available. The solution supports state-of-the art 128-bit Advanced Encryption Standard (AES), along with legacy 112-bit Triple-DES encryption during both the transmission and storage of all data.

TECHNICAL OVERVIEW

- The Connected DataProtector/SV solution supports file and print servers running Microsoft Windows 2003 or Windows 2000.
- The solution is offered as licensed software, with data backed up to your own central servers.
- Data can be recovered via CD or DVD, or onto NAS storage.
- Support for Connected’s Heal feature is included (see above).
- Server backup and recovery requires a Connected Data Center license.

- The solution automatically integrates with the Connected DataProtector/PC™ solution, applying Connected’s patented data reduction technologies across Windows file and print server data and PC data, to minimize the redundancy and overall size of file storage.

WHY CONNECTED?

- Connected, a subsidiary of Iron Mountain Incorporated, is the world leader in protecting, archiving and recovering distributed data. Over two million people and 650 leading enterprises rely on Connected solutions to keep their data secure.
- Because they work automatically and efficiently, Connected solutions reduce data loss, even over low-bandwidth connections.
- Organizations measuring the value of using the Connected DataProtector solutions have shown a positive ROI (in hard dollars) in as little as six months.
- Thanks to patented data reduction technologies, Connected solutions reduce storage and network bandwidth demands by 60% to up to 90% versus other products.
