

Electronic Vaulting — Data Protection for Remote Offices and PCs

Protecting All Your Data — No Longer Optional

You know you need to protect critical company information across the enterprise. But are you consistently protecting data where you don't have IT resources? In your remote locations, you probably have no way of knowing when a server backup problem exists. And when you're relying on your executives and mobile users to backup their own PCs, it almost certainly isn't happening consistently.

You also know that protecting critical information across your remote locations is only half the challenge. The other part is quickly recovering that backup data — whether it's a crucial server or a key file an executive accidentally deleted — without tying up your helpdesk for hours.

Enterprise-wide data protection and recovery isn't an option, it's required: the ability to restore data quickly is crucial to ensure business continuance after disaster.

Assured Protection For All Your Locations

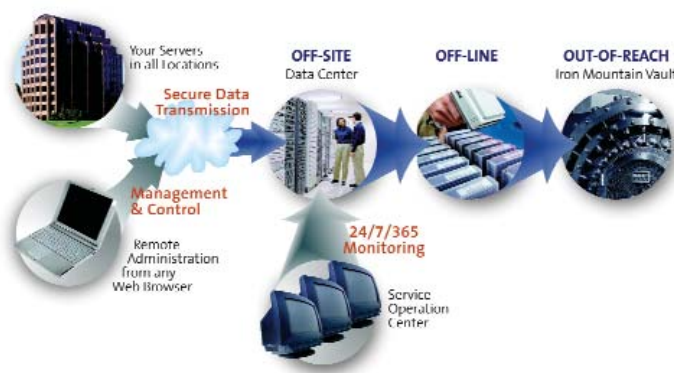

Iron Mountain offers an easy, secure and cost-effective way to protect and recover your data where your IT staff can't. Iron Mountain Electronic Vaulting backs up your servers and PCs online — reliably, automatically, consistently — and vaults your data securely off-site and off-line. You have instant access from any web browser through our web interface, so you can manage backup and restore activities centrally for all your remote sites and PC users.

Protect Your Remote Servers

Iron Mountain Server Electronic Vaulting continuously backs up changes to your server files — e-mail, databases and file servers - ensuring data is protected and current up to the last file change — no matter where the server is located. Our service backs up open files and databases including: Microsoft Exchange, SQL, Oracle and Notes. Server Electronic Vaulting automatically detects and configures Microsoft Exchange e-mail servers — and guarantees that all Exchange-specific files are backed up and can be recovered. Even if Exchange files are moved, our service can adjust automatically to compensate for the change.

Ongoing backups copy only the bytes that have changed and new files since the last backup, reducing your bandwidth requirements, server loads and network congestion.

SERVER ELECTRONIC VAULTING: FULLY MANAGED ONLINE BACKUP

The entire process is monitored 24/7 by our expert staff. We'll notify you if a backup isn't successful, and help you troubleshoot the issue. While less than half of tape restores are successful, our success rate is over 99%.

With Iron Mountain Server Electronic Vaulting you can:

- Achieve consistent, reliable backups in all your locations
- Restore critical data from any web browser — no matter where the server is located
- Restore individual files in minutes
- Avoid expensive remote storage
- Reduce the backup burden on your IT staff

Protect Your PCs and Laptops

How much of your company's data resides on PCs? According to IDC, the average corporation stores 60 percent of its data on PCs. When disaster strikes, will you be able to recover your users' files?

Iron Mountain PC Electronic Vaulting provides automated data protection for your PCs and laptops. Designed to work with limited bandwidth — even over dial-up connections — our service ensures your road warriors' data can be backed up and recovered from anywhere. Backups occur automatically in the background — transparent to users — except when needed for recovery. Your users can easily access backed up files themselves to quickly recover from "mini-disasters", such as accidental file deletions.

With Iron Mountain PC Electronic Vaulting you can:

- Eliminate help desk calls from users who lost data
- Improve end-user productivity — users can quickly recover lost data themselves
- Speed migration to new PCs
- Reduce server storage needs
- Protect PC and laptop data completely and effectively — no matter where your users are located

Go With a Name You Can Trust

Iron Mountain Electronic Vaulting services provide the most comprehensive protection for your critical data — off-site, off-line, and out-of-reach. As an outsourced service, we make your job easier by ensuring you can protect and quickly recover data on remote servers and PCs — without buying additional hardware and software, burdening your IT staff, or relying on non-technical staff.

We provide data protection to more than half of the Fortune 500 and to businesses in over 900 industries. By integrating more than 30 years of best practices and technology experience into our services, you can be assured that your backup data is secure and available — recovered fast — when it is needed. Because without the data, there is no recovery.

Iron Mountain Electronic Vaulting services utilize proven, reliable, software from our best-of-breed technology partners LiveVault® Corporation and Connected™ Corporation.
