

# Electronic Vaulting for Small and Mid-Sized Businesses

## Protecting the Lifeblood of Your Business — Your Data

Your business relies on data stored on your servers and PC's for day-to-day operations. This data is critical; the inability to quickly recover it after a business disruption would threaten your businesses' very existence.

When companies think about protecting their data, many think about risks such as fire, natural disasters, power outages, and system or hard drive failures. Businesses of all sizes also need to consider:

- Powerful viruses that can bring down critical servers
- Applications requiring 24/7 data protection
- Irreplaceable company data stored on the hard drive of one key individual (perhaps yours!)
- Disgruntled employees destroying data

For small business owners and executives of mid-sized businesses, these risks are compounded by a limited or non-existent IT staff to manage backup and guarantee successful recovery. Customized disaster recovery strategies, like those of bigger companies, have not been feasible. Yet, you need to protect your business with a backup of your critical business data:

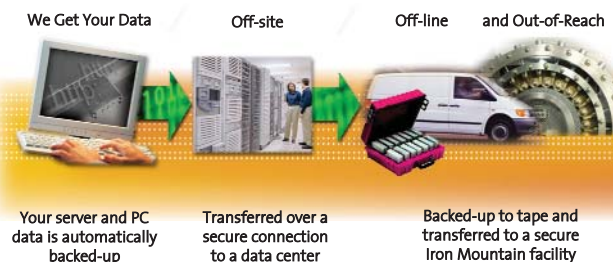

- **Off-site:** protect your data from disaster at your primary location
- **Off-line:** return your data to a point prior to virus or other attacks
- **Out-of-reach:** safeguard your data from disgruntled employees

### Data Protection Solutions for Your Unique Challenges

Iron Mountain offers an easy, secure and cost-effective way for small and medium businesses to automatically protect your data — Electronic Vaulting.

We've designed our electronic vaulting services to manage the backup process, so you can focus on your business. Your data is secure and available — recovered fast — when you need it. Because without the data, there is no recovery.

#### Complete Data Protection Made Easy

### Server Electronic Vaulting

Iron Mountain's Server Electronic Vaulting continuously backs up changes to files on your server — e-mail, databases, file servers — ensuring that your backup data is current up to the most recent change. The service even backs up open files and databases — often your most business critical information. Server Electronic Vaulting automatically configures backup of Microsoft Exchange e-mail servers, minimizing setup time and guaranteeing that your email system is protected.

The entire backup process is monitored 24/7 by our expert staff who will notify you if a backup is unsuccessful. We'll work with you to troubleshoot why the backup is failing or incomplete. Standard tape backups can't monitor your process like Iron Mountain can.

### PC Electronic Vaulting

An estimated 60% of business data resides on unprotected desktop PCs and laptops. Does this sound like your business? Transparent to users, our PC Electronic Vaulting backs up PC and notebook data automatically over a secure Internet connection. Your employees can easily access backed up files themselves to quickly recover from "mini-disasters", such as accidental file deletions.

Designed to work with limited bandwidth — even over dial-up connections — our service allows users to back up data even while traveling. Following an initial backup of the hard drive, PC Electronic Vaulting backs up only changed and new files. The end result: smaller, faster backups that don't get in the way of business — and ensure your data is protected.

Iron Mountain Electronic Vaulting services utilize proven, reliable, software from our best-of-breed technology partners LiveVault® Corporation and Connected™ Corporation.

### Gain the Benefits of Online Backup — Today

**Simple to set up.** Our services can be set up in hours, giving you a backup and recovery strategy for all your data.

**Easy to use.** After the initial setup, the backup process runs automatically in the background, no need for staff intervention.

**Anytime, anywhere access.** You control your backups and data. Our web portal lets you recover files or manage your backups from anywhere, at any time.

**Worry-free security.** We use the same level of security as online banking for your data transmission, and store backup tapes in our vaults to guard your data at all times.

**Nothing to maintain.** There's no additional hardware or software to purchase or manage.

**Rapid recovery.** When you need to recover files, you can access them instantly over the web or request data be sent on CDs or Network Attached Storage (NAS) devices.

### A Name You Can Trust

For over 50 years, businesses of all sizes around the world — more than half of the Fortune 500 and in over 900 industries — have trusted Iron Mountain with their most important assets — their records and information.
